# CIS111                                    Scott Harmon

## Lab 13

### Objectives:
- Learn how to work with methods and parameters.

### Project:
You will create a Java application using BlueJ that prints statistics about a person's names.

The program should ask the user for their first name, then print the number of vowels and consonants. Ask for their middle name, and then print the number of vowels and consonants. Ask for their last name, and then print the number of vowels and consonants.

You should use a separate method for printing the vowels and consonants in a String.

E.g.:

```
Enter first name: Mary
Vowels: 1
Consonants: 3

Enter middle name: Lou
Vowels: 2
Consonants: 1

Enter last name: Henson
Vowels: 2
Consonants: 3
```

User input is in *red*.
