OpptIn is creating a safer, quicker, on-line world for everyone. Through our proximity-based technology, we can turn any business or place into the infrastructure for its own personal and encrypted network. We aim to create a secure, simple way for people to network, find potential jobs, improve school efficiency, and even provide quicker access to life-saving medical test results.

OpptIn is searching for potential team members with experience in coding, design, and architecture. Any schedule works, but must be able to attend meetings that are given adequate notice for.

If an intern wishes to extend their term of involvement with OpptIn in order to acquire more experience, that may be possible upon their performance review.

Website: [https://www.opptin.com/internship](https://www.opptin.com/internship)

**General Responsibilities:**
- Attend regular meetings with team members, whether online or in-person
- Complete all tasks assigned to you on time
- Be able to work in a group with others
- Update the rest of the team on your progress via discord
- Be open to sharing your ideas with the rest of the team
Full Stack Developer

Requirements

- Proficient in NodeJs
- Proficient in Ionic design framework
- Proficient in Angular 4 framework
- Proficient in JavaScript
- Proficient in JavaScript frameworks
- Proficient in back-end web development
- Proficient in creating and working with databases
- A portfolio of completed projects/previousley created websites

Location Services Developer

Requirements

- Experience with Arduino or Raspberry Pi
- Proficient in Python
- Proficient in C, C++, and Java
- Experience with working on device hardware
- Experience with hardware engineering
- Experience with Bluetooth tools
- Experience with using hardware and Bluetooth for location services
- Experience with working with GPS and other location tools for location services
- Experience with working on cross platform development
- Experience with working on device compatibility tools
iOS Developer

Requirements

• Minimum 0-1 year experience with mobile development with Swift, Xcode and the iOS SDK
• Understanding of Apple’s design principles and interface guidelines
• Basic computer science knowledge in algorithms and data structures
• Experience in iOS 12 & iOS13
• Experience with Git, CocoaPods and designing StoryBoard
• Experience with AlamoFire
• Experience with developing network and geolocation-based applications
• Experience with CI/CD and MVC design model

Android Developer

Requirements

• Experience with Android Studio IDE
• Experience with Java
• Experience with XML
• Experience implementing databases in Android applications preferred
• Design experience preferred
• Ability to attend meetings remotely or in-person and maintain a presence within the group, even after Proof of Concept and Alpha completion
Decentralized App Developer

Requirements

- Experience in developing distributed systems or distributed storage
- Experience in writing smart contracts for blockchain frameworks
- Experience with virtualization and container orchestration technologies
- Experience with decentralized applications

Application Developer (w/focus on Gaming):

Requirements (Any of the following):

- Proficient in C++, C#, or Java
- Proficient in Cloud Code/JavaScript
- Proficient in Objective-C
- Proficient in using Unity, Unreal Development Engine, or other game dev engines
- Familiar with Mobile App Development
- Sufficient knowledge of decentralized technology
- Sufficient knowledge of 2D and 3D design tools

Application Developer (w/focus on AR/VR):

Requirements (Any of the following):

- Proficient in C++ or C#
- Proficient in Unity development or Unreal Development Engine
- Proficient in Blender or 3Ds Max
- Sufficient knowledge of Blockchain and decentralized technology
- Proficient in working with AR/VR devices
- Proficient in scripting languages such as Python or JavaScript
Peer-2-Peer System Specialist

Requirements

- Experience with Peer-to-Peer system development
- Proficient in C++
- Proficient in Java
- Proficient in C
- Proficient in Python
- Proficient in Javascript and NodeJs
- Proficient in Swift
- Proficient in server-side development
- Experience with mobile development
- Experience with developing Peer-to-Peer networks on mobile devices
- Experience with developing Peer-to-Peer networks on computers
- Portfolio of decentralized apps/projects

Blockchain Developer

Requirements

- Proficient in BlockChain development and other BlockChain technologies.
- Proficient in storing BlockChain data
- Proficient in creating messenger applications
- Proficient in dynamic/real-time data transfers
- Proficient in Ajax, PHP, or other server-side web development language
