

KBOR DETAILED ASSESSMENT OF STUDENT LEARNING REPORT

I. Introduction

A) College, Department, and date.

College: Engineering

Department: Computing and Information Sciences

Date: April 3, 2009

B) Person(s) responsible for preparing the report.

Gurdip Singh

II. Overview of Assessment

A) Summary of the Department's/Program's ORIGINAL approved Assessment Plan, including a list of the original approved Student Learning Outcomes (SLOs) (Include a copy of the original Assessment Plan in *Appendix A*)

The original assessment plan involved evaluating the students against the following Student learning Outcomes:

- (1) Ability to use software engineering techniques,
- (2) Ability to apply theoretical math, science, and computational skills to solve advanced scientific and/or engineering principles.
- (3) Ability to communicate effectively both in written and oral forms.

The supervisory committee of each graduate student was responsible for assessing the students. Data with respect to direct and indirect measures are collected by the committee members during the period of study of the student and during the final presentation. A form was given to each member of the committee at the time of final oral exam to perform the evaluation.

B) Summary of modifications made to the Assessment Plan during the previous four years.

From the data obtained from the assessment, some international students were assessed as "not acceptable" with respect to the learning outcome "Ability to communicate effectively both in written and oral forms". To obtain better feedback, the assessment form was modified to obtain further feedback from whether oral or written or both forms of communication skills were unacceptable.

Advising forms were introduced for students to fill out in conjunction with their advisors at the end of each semester. These forms enable the student progress to be monitored more closely.

C) List of the current SLOs for the Department/Program

1. Ability to use software Engineering Techniques,

2. Ability to apply theoretical math, science, and computational skills to solve advanced scientific and/or engineering principles.
3. Ability to communicate effectively both in written and oral forms.

D) Program Assessment Alignment Matrix (include a copy in *Appendix B*)

Program Correlation Matrix

| Program SLOs | University-wide SLOs (Graduate Programs) | | | Program SLO is conceptually different from university SLOs |
|---|--|--------|------------------------------------|--|
| | Knowledge | Skills | Attitudes and Professional Conduct | |
| 1. Ability to use software engineering techniques | X | X | | |
| 2. Ability to apply theoretical skills | X | X | | |
| 3. Communication | | X | | |

Program Alignment Matrix

| SLO/ Required courses/ Experiences | CIS725 CIS744 CIS746 CIS764 | CIS740 CIS748 CIS771 | CIS826 CIS841 CIS842 CIS864 | Application Area courses | MSE Portfolio | MSE Presentations |
|--|--------------------------------------|----------------------------|--------------------------------------|-----------------------------|------------------|----------------------|
| Program SLOs | | | | | | |
| Ability to use software engineering techniques | | X | X | | X | |
| Ability to apply theoretical skills | X | X | X | X | | |
| Communication | | | | | X | X |
| University SLOs | | | | | | |
| knowledge | X | X | X | X | | |
| Skills | X | X | X | X | X | X |
| Attitudes and Professional conduct | | | | | | |

- E) List the website where the Program SLOs, Assessment summary, and Alignment Matrix for each degree program are located (within two clicks of the Department/Program front page).

<http://www.cis.ksu.edu/programs/objectives>

III. Assessment Strategies

For each SLO, please describe:

- A) The measures used (approximately one-half of the measures used are to be direct measures, and at least one direct measure must be used for each student learning outcome) (Examples of direct measures can be accessed at <http://www.k-state.edu/assessment/plans/measures/direct.htm>).

The following measures were used for each SLO.

SLO 1: *Ability to use software Engineering Techniques*

Direct measure:

- i. Software architecture design, coding and testing in a substantial implementation
- ii. MSE Portfolio assessment
- iii. Software and project documentation
- iv. Project presentation.

Indirect measure:

- i. Interactions with the supervisory committee.
- ii. Timely completion of the project

SLO 2: *Ability to apply theoretical math, science, and computational skills to solve advanced scientific and/or engineering principles.*

Direct measure:

- i. Formulation of the problem addressed in the MSE project.
- ii. Formal specification of a software system
- iii. Efficiency of the proposed solution.

Indirect measure:

- i. Interactions with the supervisory committee

SLO 3: *Ability to communicate effectively both in written and oral forms.*

Direct measure:

- i. Software and project documentation
- ii. Project presentation.

Indirect measure:

i. Interaction with the supervisory committee

B) The timetable for the assessment strategies

A student in the MS program chooses the major professor and the supervisory committee in the second semester. For the remaining of the period of study, the learning outcomes are assessed by the supervisory committee based on the interactions with the student. The presentation made by the student at the end of the final semester is an important part of the assessment strategy.

C) A description of the method(s) in which the measures were administered.

At each final oral exam in the CIS department, the CIS graduate program outcome evaluation sheet is given to each member of the student's supervisory committee. The forms are returned to the Graduate Study secretary. The results from these forms are tabulated and analyzed. The results are then reported to the CIS faculty.

IV. Assessment Results

Describe the results of the assessment strategies, including, but not limited to:

A) The specific quantitative and qualitative data collected during the review cycle

The evaluation form required the supervisory committee members to rate each student on a scale from 1 to 5 on a set of six questions. In case the communication skills were judged to be unacceptable, the evaluator had to indicate whether oral or written skills were an issue.

B) The sample of students from whom data were collected during review cycle

The data was collected for all students who graduated during this period.

C) Other results or outcomes from the assessment strategies.

The feedback forms results were as follows for question.

- Question 1 (which directly assessed SLO1): 34% were rated as acceptable and 64% above acceptable or excellent.
- Question 2 (which directly assessed SLO2): 44% were rated as acceptable and 49% above acceptable or excellent.
- Question 3 (which indirectly assessed SLO1 and SLO2): 45% were rated as acceptable and 53% above acceptable or excellent.
- Question 4 (which indirectly assessed SLO1 and SLO2): 35% were rated as acceptable and 63% above acceptable or excellent.
- Question 5 (which indirectly assessed SLO1, SLO2 and SLO3): 29% were rated as acceptable and 58% above acceptable or excellent.
- Question 6 (which directly assessed SLO3): 18% were rated as acceptable and 81% above acceptable or excellent.

V. Review of the Assessment Results

- A) Describe the process by which program faculty reviewed the results and decided on the actions and/or revisions that were indicated by those results.

The results obtained from the evaluation forms are reviewed by the Graduate Studies Committee and distributed to the CIS faculty, and compared with the previous results. The faculty discusses these results in a faculty meeting. Changes to the curriculum and/or changes to the expectations for graduate performance are discussed, documented and implemented.

VI. Actions and Revisions Implemented

- A) Describe the actions and/or revisions that were implemented in response to the assessment results and review of the results by faculty.

From the data obtained from the assessment, some international students were assessed as “not acceptable” with respect to the learning outcome “Ability to communicate effectively both in written and oral forms”. To obtain better feedback, the assessment form was modified to obtain further feedback from whether oral or written or both forms of communication skills were unacceptable. Furthermore, it is now specifically mentioned in the admission letter that the students might be evaluated for written and oral communication skills and may be required to take courses in the English Language Program.

We have also become more selective in our admission process and more students have been rejected due to lack of appropriate back-ground.in computer science.

VII. Effects on Student Learning and Future Plans

- A) Describe the effects on student learning of the actions and/or revisions that occurred during the review cycle.

Written and oral communication skills are important to successfully develop and present the MSE portfolio. We anticipate that the changes performed will enable students to be more successful in our program.

Due to lack of background courses, students often had to spend extra time taking pre-requisite courses. By strengthening the admission requirements, the students will be better prepared and complete the degree in a reasonable time frame.

- B) Describe the plans for the next ASL cycle. All changes to the ASL plan should be clearly justified relative to assessment results, data, and actions described in this report.

One of the missing pieces of data in the current assessment plan is the lack of feedback from the graduate students. We plan to collect more data based in the form of student feedback with respect to the student learning outcomes. We plan

to collect and analyze data on incoming students (GPA, GRE scores) and correlate it with their performance in our program on a continuous basis. Data such as average GPA of students and average time for completion of the program will be computed and made available to the faculty for assessment.

10/29/04

FEB 28 2005

**CIS Graduate Degree Program
Assessment of Student Learning Plan
Kansas State University**

- Check the box if your program's student learning outcomes have been modified since November 2003. If so, please email (apr@ksu.edu) or attach a hard copy to this document.

A. College, Department, and Date

College: *Engineering*
Department: *Computing and Information Sciences*
Date: *10/29/2004*

B. Contact Person(s) for the Assessment Plans

David A Gustafson, Graduate Program Director

C. Degree Program

MS in Computer Science
Masters in Software Engineering
PhD in Computer Science

D. Assessment of Student Learning Three-Year Plan

1. Student Learning Outcome(s)

- 1. ability to use software engineering techniques to design and implement significant software systems.**
- 2. ability to apply theoretical math, science, and computational skills to solve advanced scientific and/or engineering problems.**
- 6. ability to communicate effectively both in written and oral forms**

Relationship to K-State Student Learning Outcomes (insert the program SLOs and check all that apply):

| Program SLOs | University-wide SLOs (Graduate Programs) | | | Program SLO is conceptually different from university SLOs |
|---|--|--------|------------------------------------|--|
| | Knowledge | Skills | Attitudes and Professional Conduct | |
| 1. ability to use software engineering techniques | X | X | | |
| 2. ability to apply theoretical skills | X | X | | |
| 6. communication | | X | | |

2. How will the learning outcomes be assessed? What groups will be included in the assessment?

At each final oral exam in the CIS department, the CIS graduate program evaluation sheet will be filled out by the major professor and each committee member. The forms will be returned that day to the graduate study secretary. At the end of each semester, the Graduate Study committee will analyze the data from the forms. At a minimum, average and standard deviation of the scores will be calculated.

Each professor will be confidentially informed of the scores of his/her students. This information will not be included in the official results.

3. When will these outcomes be assessed? When and in what format will the results of the assessment be discussed?

4.

At each final oral exam. See above.

5. What is the unit's process for using assessment results to improve student learning?

These numbers will be distributed to the CIS faculty and compared with previous results. The faculty will discuss the results at a faculty meeting at the beginning of each semester. Changes to the curriculum and/or changes to the expectations for graduate performance will be discussed, documented, and implemented.

Appendix B: Assessment Alignment Matrix

| SLO/ Required courses/ Experiences | CIS725 CIS744 CIS746 CIS764 | CIS740 CIS748 CIS771 | CIS826 CIS841 CIS842 CIS864 | Application Area courses | MSE Portfolio | MSE Presentations |
|--|--------------------------------------|----------------------------|--------------------------------------|-----------------------------|------------------|----------------------|
| Program SLOs | | | | | | |
| Ability to use software engineering techniques | | X | X | | X | |
| Ability to apply theoretical skills | X | X | X | X | | |
| Communication | | | | | X | X |
| University SLOs | | | | | | |
| knowledge | X | X | X | X | | |
| Skills | X | X | X | X | X | X |
| Attitudes and Professional conduct | | | | | | |

Program Correlation Matrix

| Program SLOs | University-wide SLOs (Graduate Programs) | | | Program SLO is conceptually different from university SLOs |
|--|--|--------|--|--|

| 1. Ability to use software engineering techniques | X | X | | |
| 2. Ability to apply theoretical skills | X | X | | |
| 3. Communication | | X | | |

CIS Graduate Program Outcomes Checklist

To be filled out by each committee member for each MS/MSE/Ph.D. oral exam. This form is not to be considered an evaluation of the student. It is intended as part of the evaluation of the CIS graduate program. The results will not be shown to the student. The answer of N/A for not applicable is acceptable.

Student Name:

Date, Time and Place of Oral Exam:

Committee Members:

Program option: MS report MS Thesis MS Non-thesis/report MSE Ph.D.

Please rank each of the outcomes between 1 and 5 where 1 is unacceptable, 2 is marginally unacceptable, 3 is acceptable, 4 is above acceptable, and 5 is excellent.

| Outcomes | Score |
|--|-------|
| 1. Ability to use software engineering techniques to design and implement significant software systems. | _____ |
| 2. Ability to apply theoretical math, science, and computational skills to solve advanced scientific and/or engineering problems. | _____ |
| 3. (MS and MSE) Demonstrate advanced knowledge in the area of specialization. or (PH.D) Demonstrate advanced expertise in multiple subject areas and a deeper understanding of the frontiers in a specialized research area. | _____ |
| 4. (MS nonthesis/report) Ability to plan and conduct scholarly activities. or (MS report) Ability to plan and conduct scholarly activities and to analyze and synthesize the current literature and methodology. or (MS thesis) Ability to plan and conduct original scholarly activities, to analyze and synthesize the current literature, and to make an original contribution to the field. or (MSE) Ability to plan, conduct, and apply scholarly activities resulting in a substantial implementation. or (Ph.D.) Ability to plan and conduct original scholarly activities, to analyze and synthesize the current literature, and to make a significant original contribution to the field and extend the frontiers of a focused research area. | _____ |
| 5. Effectiveness in leadership, collaboration, and professional service. | _____ |
| 6. Ability to communicate effectively in both written and oral forms. If below a 4 rating, please circle written or oral or both to indicate the problem area. | _____ |
| Oral Written Both | |

Name of committee member filling out form:

Did you serve as the Major Professor for this student? Yes No
