Outline and Motivation

► Logic programs

- ▷ widely accepted paradigm for knowledge representation and reasoning
- ▷ readable by humans

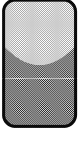

► Fibring artificial neural networks

- ▷ trainable from raw data
- ▷ robust with respect to noisy data

► A neural implementation of a logic program

- ▷ tries to combine the advantages of both paradigms
- ▷ this is only proof of possibility

► Conclusions and further work

Logic Programs & their Semantics

► A simple logic program \mathcal{P} :

$even(0)$.

$\% 0$ is an even number

$even(s(X)) \leftarrow not\ even(X)$. $\%$ the successor $s(X)$ of a non-even X is even

$odd(s(X)) \leftarrow even(X)$. $\%$ the successor $s(X)$ of an even X is odd

► The corresponding Herbrand-base $\mathcal{B}_{\mathcal{P}}$ and two interpretations:

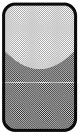

$\mathcal{B}_{\mathcal{P}} = \{even(0), even(s(0)), \dots, odd(0), odd(s(0)), \dots\}$

$I_1 = \{even(0)\}$ $I_2 = \{even(0), odd(0)\}$

► The associated immediate consequence operator $T_{\mathcal{P}}$:

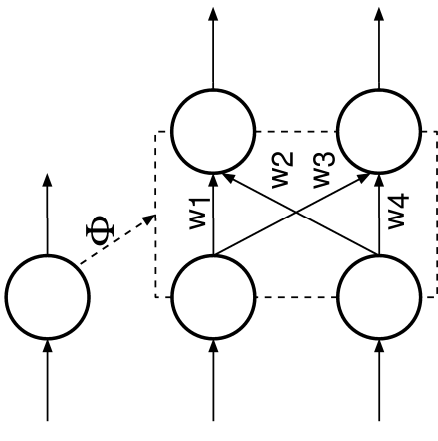

$I = \{even(0), even(s(s(0)))\}$

$T_{\mathcal{P}}(I) = \{even(0), odd(s(0)), odd(s(s(0))), even(s(s(0))), \dots\}$

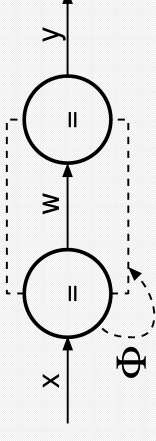

Firing Artificial Neural Networks [GG04]

- ▶ A (firing) neural network is a set of simple connected units
- ▶ Activation of single neurons can influence other weights through a firing function

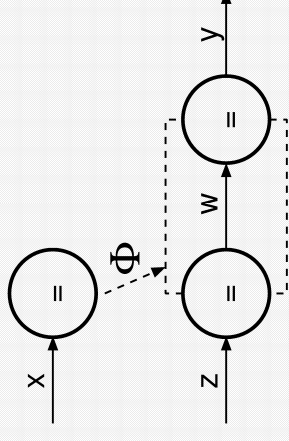

▶ Example 1 ($y = x^2$):

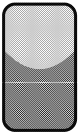

$$\Phi : (w, x) \mapsto x$$

▶ Example 2 ($y = (x > 0) ? z : 0$):

$$\Phi : (w, x) \mapsto \begin{cases} 1 & \text{if } x > 0 \\ 0 & \text{otherwise} \end{cases}$$

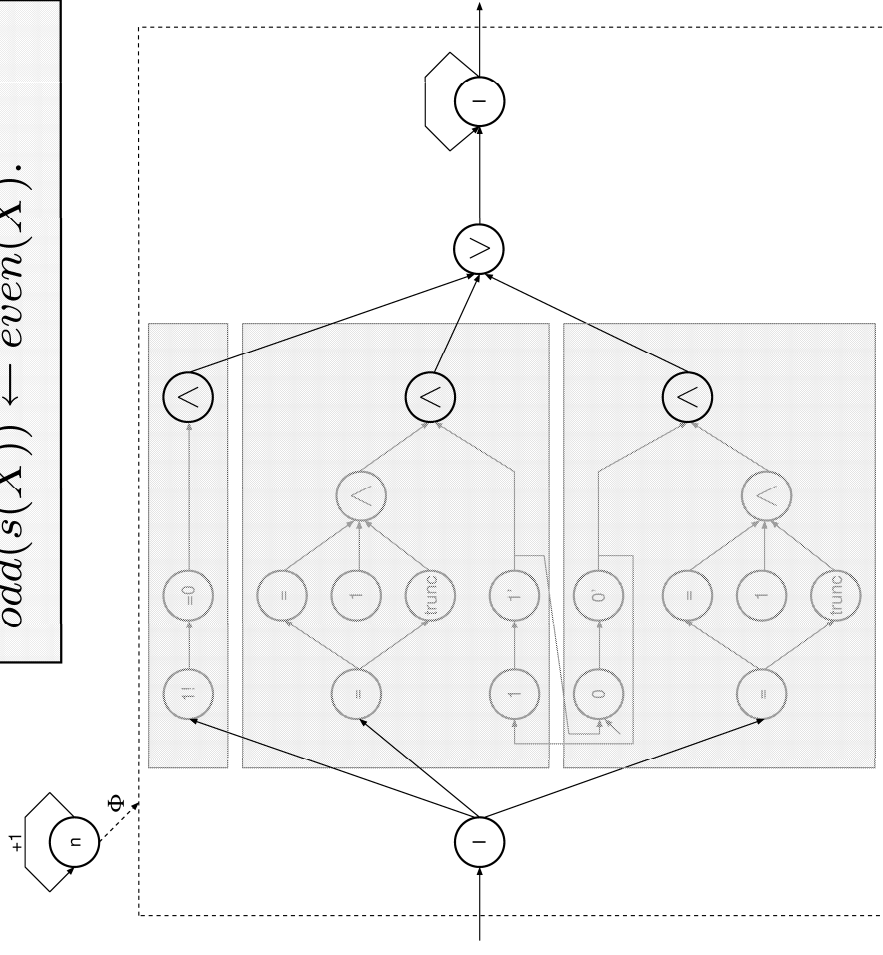

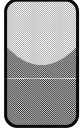

Implementing Logic Programs - Idea

- There is ...
- ▶ a global counter n fibring the network
 - ▶ a neuron providing the interpretation I
 - ▶ a subnetwork for each clause, that fires if the clause outputs the atom n
 - ▶ a neuron collecting $T_{\mathcal{P}}(I)$

$even(0).$
 $even(s(X)) \leftarrow not\ even(X).$
 $odd(s(X)) \leftarrow even(X).$

Embedding Interpretations into Real Numbers

- Interpretations are sets of atoms

$$I_1 = \{even(0)\}$$

$$I_2 = \{even(0), odd(0)\}$$

- A (bijjective) levelmapping $l : I_{\mathcal{P}} \rightarrow \mathbb{N}$ assigns a unique natural number to each atom, hence enumerates the Herbrandbase

$$B_{\mathcal{P}} = [even(0)_1, odd(0)_2, even(s(0))_3, odd(s(0))_4, \dots]$$

- We can define an embedding R as follows:

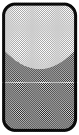

$$R : I_{\mathcal{P}} \rightarrow \mathbb{R} : I \mapsto \sum_{A \in I} 4^{-l(A)}$$

$$R(I_1) = 4^{-1} = 0.25$$

$$(\text{ = } 0.10000\dots_4)$$

$$R(I_2) = 4^{-1} + 4^{-2} = 0.3125$$

$$(\text{ = } 0.11000_4)$$

Prefixing Interpretations

- ▶ We can define the prefix function pref on $I_{\mathcal{P}}$ as follows:

$$\text{pref} : I_{\mathcal{P}} \times \mathbb{N} \rightarrow I_{\mathcal{P}} : (I, n) \mapsto \{A \in I \mid l(A) \leq x\}$$

$$I = \{\text{even}(0)_1, \text{even}(s(0))_3, \text{odd}(s(0))_4, \text{odd}(s(s(0)))_6\}$$

$$\text{pref}(I, 3) = \{\text{even}(0)_1, \text{even}(s(0))_3\}$$

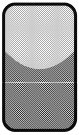

- ▶ pref can be embedded into \mathbb{R} :

$$\text{pref} : \mathbb{R} \times \mathbb{N} \rightarrow \mathbb{R} : (x, n) \mapsto \frac{\text{trunc}(x \cdot B^n)}{B^n}$$

$$\begin{array}{ccc} I \in I_{\mathcal{P}} & \xrightarrow{\text{pref}} & I' \in I_{\mathcal{P}} \\ R \downarrow & & \downarrow R \\ x \in \mathbb{R} & \xrightarrow{\text{pref}} & x' \in \mathbb{R} \end{array}$$

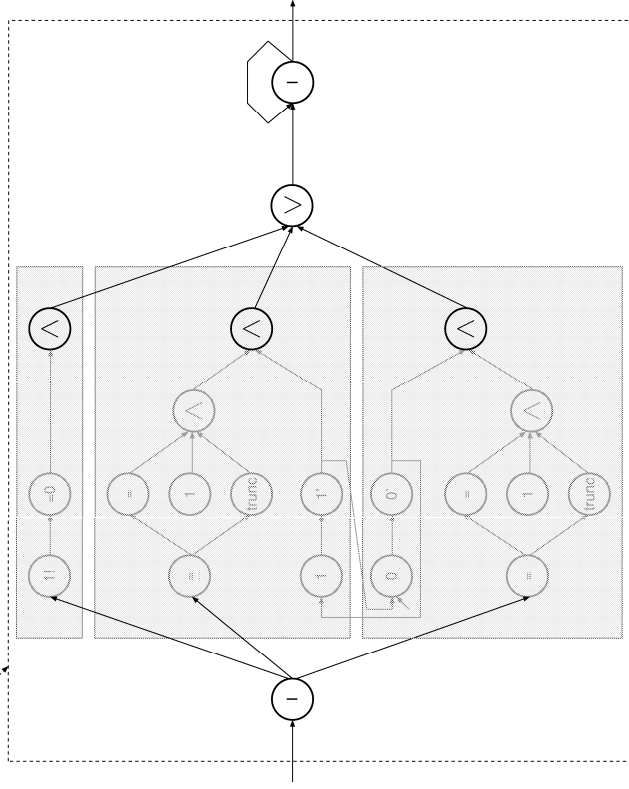

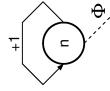

$$x = R(I) \approx 0.269$$

$$\text{pref}(x, 3) = R(\text{pref}(I, 3)) \approx 0.265$$

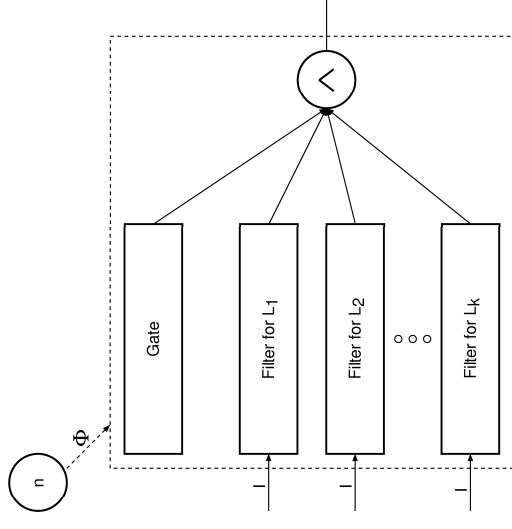

Implementing Logic Programs - Idea (again)

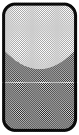

$even(0).$
 $even(s(X)) \leftarrow not\ even(X).$
 $odd(s(X)) \leftarrow even(X).$

For each clause there is ...

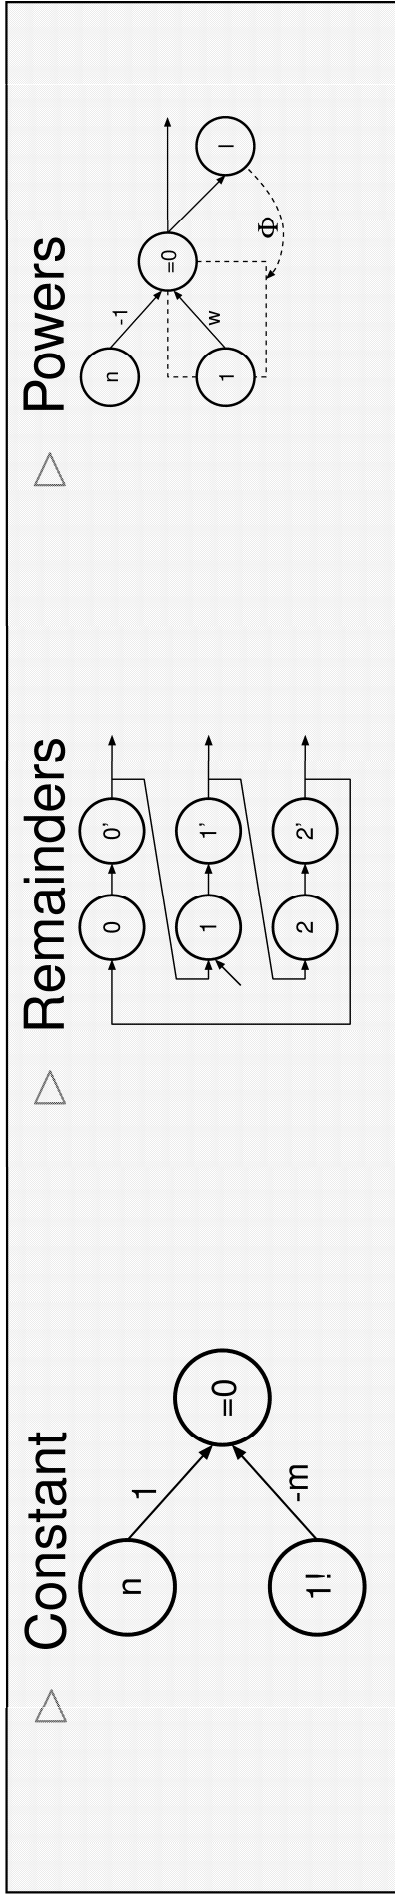

- ▶ a 'gate'
- ▶ a 'filter' for each body literal
- ▶ an 'and'-neuron

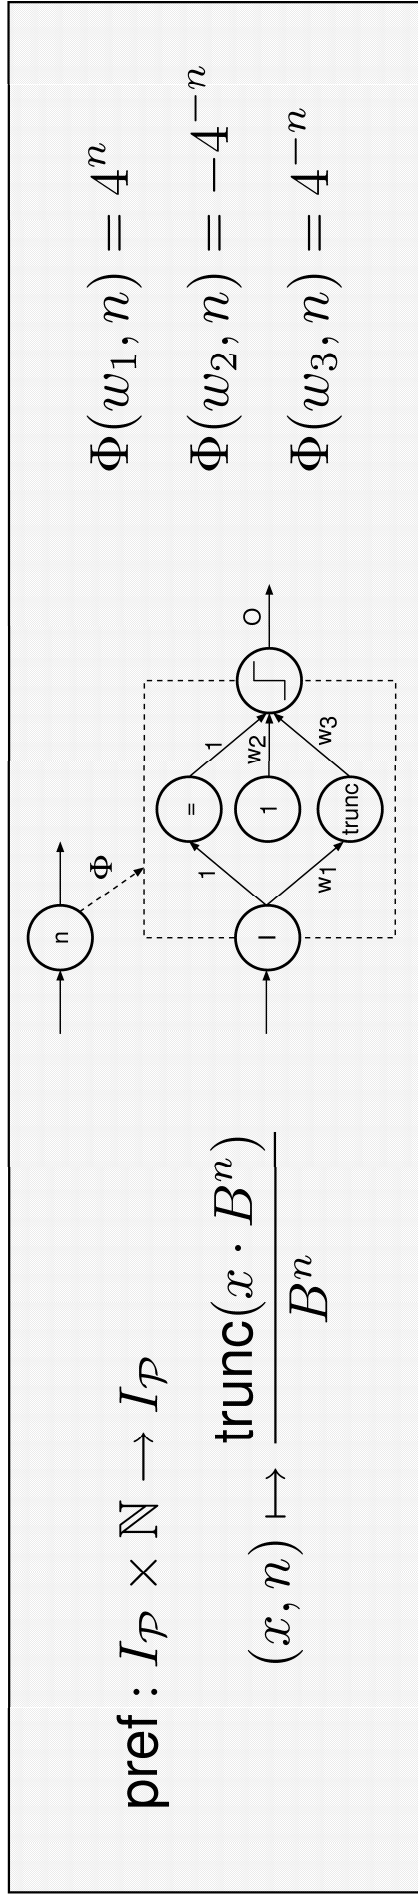

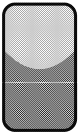

Gates and Filters for Clauses ($H \leftarrow L_1 \wedge L_2 \wedge \dots \wedge L_n$)

- ▶ The “gate” decides whether the clause can output atom n

- ▶ A filter for atom n checks whether this atom is entailed in I , by computing a modified pref-function

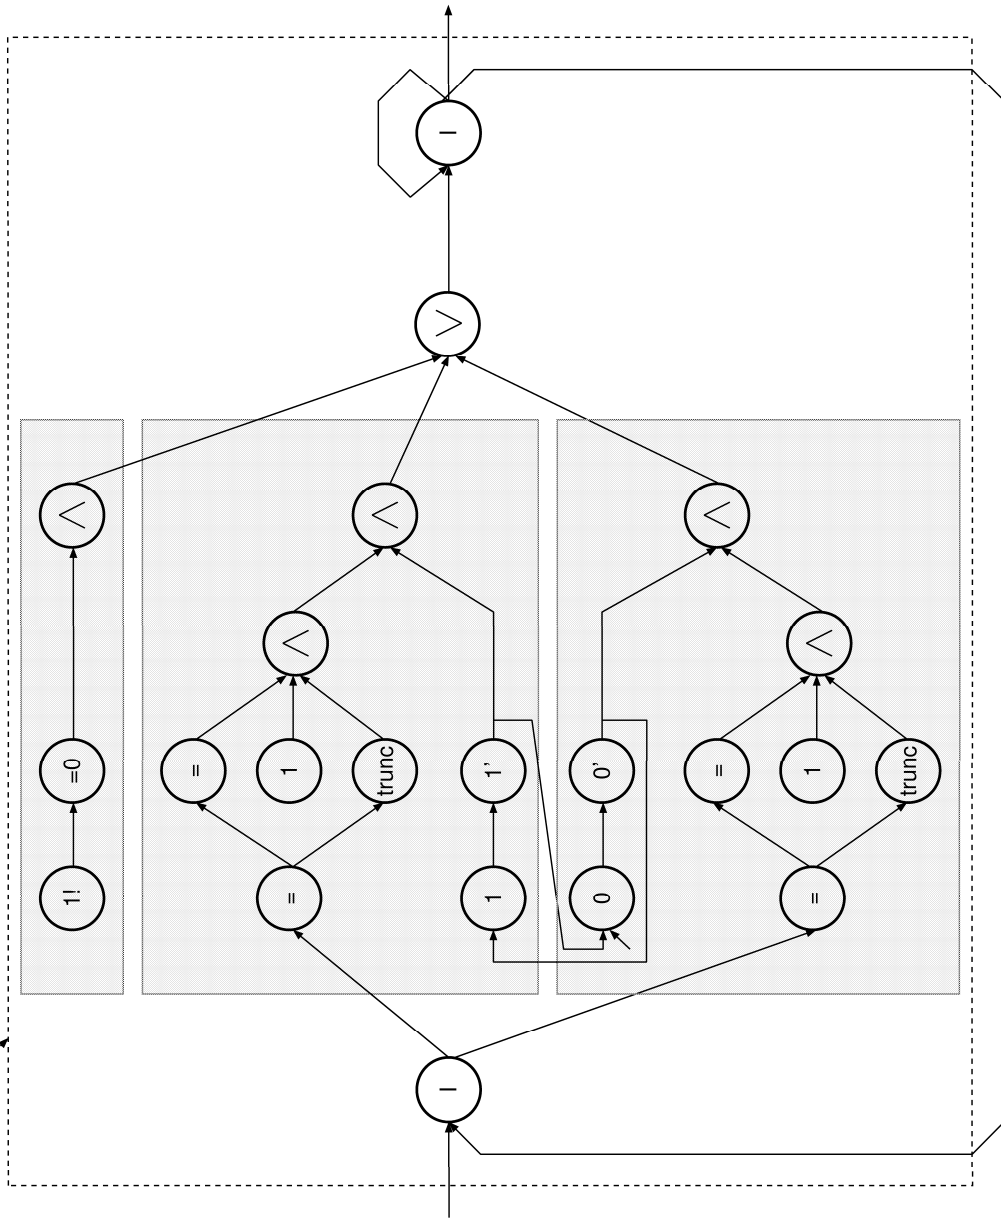

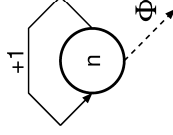

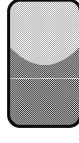

A Worked Example

$even(0)$.

$even(s(X)) \leftarrow not\ even(X)$.

$odd(s(X)) \leftarrow even(X)$.

Conclusion

- ▶ We can implement the $T_{\mathcal{P}}$ -operator associated to a logic program \mathcal{P} in a neural network

Further Work

- ▶ Development of training techniques for fibring neural networks
- ▶ Automatic construction of fibring neural networks
- ▶ ...

Thank you for your attention
